

Comprehensive Pipeline Integrity Solutions

About Us

Critical Infrastructure Holdings is a family of specialized brands focused on meeting the evolving needs of the energy delivery industry through preventive, data-driven technology and pressurized pipeline maintenance solutions. We combine proven field practices with advanced inspection, cleaning, monitoring, and operational technologies to help pipeline operators maintain safer, cleaner, and more reliable assets. By bringing together the expertise and capabilities of each company within our family, we provide a coordinated, whole-solution approach designed to support the full pipeline maintenance and integrity lifecycle.

Our Strategy

Our strategy is to leverage the collective strength of our brands to deliver comprehensive infrastructure solutions that protect the environment, improve operational safety, preserve asset integrity, and support long-term system performance. Rather than addressing pipeline challenges in isolation, we work collaboratively to identify risks, develop fit-for-purpose solutions, and provide customers with a more connected path from assessment and cleaning to inspection, monitoring, and ongoing maintenance. Our shared focus on why we do the work, how we approach it, and the technologies we use guides our culture and our commitment to protecting the world's critical infrastructure.

Our Brands

Winterhawk Pipeline Services collects preventative and predictive data sets on the integrity of pressurized pipelines. Winterhawk's Digi-Cal tool provides a simple, durable, and affordable Caliper and Debris Measurement reporting.

The Speed Control Pig (SCP) is the superior cleaning solution for 16"- 48" natural gas and NGL lines. The SCP can be utilized as a driver for additional tools such as cleaning pigs or inspection pigs. The SCP runs at operator defined speeds ensuring minimal reduction in flow during cleaning operations.

The Scan360 from Inline Services is the next-generation in pipeline inspection technology. This technologically advanced tool provides three data sets from one pig run: High-Resolution Geometry, Debris Measurement & Mapping, and Leak Detection and Location.

Inline provides efficient and expert mechanical cleaning solutions for pressurized pipelines. Inline proudly manufactures all of its pigging product lines in Tomball, TX. Excelling in quick order processing for clients around the globe.

Sun Pipeline Solutions specializes in customized mechanical cleaning solutions. For over 50 years they have developed tailored and innovative technical solutions for pressurized pipelines.

Inline Process provides Product Recovery Systems for both industrial and sanitary applications. Their cleaning solutions are available in food or chemical grade material and can be heat and chemical resistant.

Ultimate CNG is a nationwide natural gas service provider dedicated to the secure and dependable delivery of CNG and Mega CNG. They provide a wide range of services that support natural gas operations in North America.
