

Tuboscope™

Product & Service Offerings

As a leading service company for more than 85 years, Tuboscope™ has provided the energy industry tubular expertise and an integrated suite of value-added solutions that reduce risk, improve performance, and protect your investment. We maximize the life cycle of your assets, helping you drill safer and more efficiently, increase well production, decrease downtime, and optimize pipeline integrity.

Tuboscope has built its reputation on being innovative, safety conscious and service minded. Our team of experts will continue to lead the way by offering a targeted package of products and services that consistently optimize your investment.

TK™ Corrosion Control

NDT Inspection Services & Mill Systems

Machining & Threading Services

TCS™ Hardbanding

Artificial Lift Technologies

Line Pipe & OCTG Connection Systems

Specialty Inspection Services (SIS)

Asset & Inventory Management

MSI Pipe Protection Technologies (PPT)

XL Systems Large Bore Casing & Connectors

TK™ Corrosion Control

Tube-Kote™ (TK) Coatings set the industry standard for tubular protection and performance in the most challenging environments.

- Corrosion and wear protection, deposit mitigation, flow efficiency and thermal insulation.

TK-Liner is a high-performance fiberglass-reinforced (GRE) protective lining system available in a variety of connecting options for corrosive environments in production, injection, and disposal applications.

- Corrosion protection, thermal insulation, flow efficiency.

Associated Corrosion Control Products:

Nickel, Corvel™, Teflon™, Molydag™, Coupling Guard, O.D. Varnish/Rust preventative.

NDT Inspection Services & Mill Systems

NDT Inspection Services

- Electromagnetic Inspection (EMI)
- Ultrasonic (UT) / Phased Array (PA)
- Wall Mapping / Wall Data
- TruMap™ Multi-Dimensional Inspection Package
- TruPhase™ 360° 2-D Phased Array Technology
- O.D. Laser Measurement
- Visual Examination
- Dimensional Measurements
- Magnetic Particle Inspection (MPI)
- Gator Hawk Connection Leak Detection
- Associated Inspection & Maintenance Services

Riser Inspection Available in Select Areas

Mill Systems

- Premier provider of tube, pipe mill and end finisher inspection equipment.

Machining Services

Threading

- API Rotary Shoulder Connections
- Grant Prideco™ Premium Drill Pipe Connections
- Drill Collars and Heavy Weight
- Casing & Tubing
- Two-Step Connections
- Pup Joints, Kellys, and Stabilizers

Manufacture of new Drill String Accessories

- Traceable New Material
- According to API Specifications

Manifold Fittings

Artificial Lift Technologies

Systems approach comprised of integrated services, products and technologies that optimize well performance and extend the life of your production string.

- **WellChek™** On-Site Tubing Inspection
- **WellTrak** Tubing Data Management and Evaluation
- **Tube-Kote™ (TK™) Coatings** for Tubing and Sucker Rods
- **New Era™** Rod Guides — Proprietary Material and Guide Installation
- **RGAP™** Rod Guide Advisory Program — Rod Guide Design, Material Selection and Placement

Line Pipe & OCTG Connection Systems

Protecting the area in and around the connection is a critical component for tubular integrity and efficient operations. Our field-proven OCTG and line pipe connection systems provide safe, reliable protection in corrosive environments.

- **KC™- Connection** is a high-performance modification to API 8rd, EUE, STS, LTC & BTC connections that protects the connection area from corrosion, erosion, and loss of containment. This system is compatible with bare, GRE lined or internally coated pipe.
- **Thru-Kote™** is a welded connection system that protects internal coating during the welding process of pipelines and gathering systems.
- **Zap-Lok™** is a safe, fast, cost-effective mechanical pipeline connection system for bare or internally coated pipelines. When used in conjunction with TK internally coated line pipe, this system provides a continuous coated surface through the connection area.

Please contact your local Tuboscope representative for information about these services in your area.

TCS™ Hardbanding

TCS™ Hardbanding provides the best combination of tool joint and casing wear protection.

- Mobile and in-plant/facility application on drill pipe, collars, work strings, heavy weight and other downhole components.
- Single source for wire manufacture, new pipe application, and Re-application worldwide.

Specialty Inspection Services (SIS)

Rig inspection, repair, and survey services for offshore and onshore rigs to ensure your rig meets global compliance and inspection requirements.

- Rope Access
- Derrick Services
- DROPS
- Load Testing
- Lifting Gear Inspection (LGI)
- NDT Inspection

Asset & Inventory Management

TracID™ utilizes field-proven RFID technology to capture all asset history, enabling better-informed decision making on drill string design, inspection, repairs and maintenance. TracID Lifecycle Management, along with offerings from **Grant Prideco™** and **M/D Totco™**, delivers a complete, data-driven asset management solution.

TuboGOLD online inventory tracking system provides real-time material tracking and customizable reporting to accurately and efficiently manage your assets.

MSI Pipe Protection Technologies (PPT)

The widest range of high-performance pipe & thread protection products designed and manufactured under the strictest and highest quality manufacturing standards in the industry.

- Thread Protectors
- Custom Products and Services
- Pipe Storage and Handling Systems
- Stabbing Guides
- Lifting Bails

XL Systems Large Diameter Casing & Connectors

Integral and weld-on connectors ranging from 16" to 72" in diameter.

- Onshore and offshore energy applications include conductor strings, surface casing, liners, and caissons.
- Sole provider of wedge thread technology for large-bore pipe
- **Viper™, XLW / XLW-GT / XLW-S, XCalibur, Scorpion™, XLF, XLC-S.**
