

Tuboscope™

Product & Service Offerings

For more than 85 years, Tuboscope™ has provided the energy industry tubular expertise and an integrated suite of value-added solutions that reduce risk, improve performance, and protect your investment. We maximize the life cycle of your assets, helping you drill safer and more efficiently, increase well production, decrease downtime, and optimize pipeline integrity.

Built on a reputation for innovation, safety, and service excellence, our team of experts continues to lead the way by offering a targeted package of products and services that consistently optimize your investment.

TK™-Corrosion Control

Artificial Lift Technologies

Machining & Threading Services

TCS™-Hardbanding

TK™-Corrosion Control

The proprietary line of Tube-Kote™ (TK) corrosion control technologies delivers unmatched protection and performance, extending asset life, improving reliability, and reducing downtime. The TK portfolio includes internal and custom coatings for drill pipe, OCTG, line pipe, and accessories, as well as TK-Liner Glass-Reinforced Epoxy (GRE) for OCTG applications. Key benefits include corrosion and wear protection, deposit mitigation, improved flow efficiency, and thermal insulation. Alternative coating materials are also available to meet specific application needs.

Artificial Lift Technologies

Tuboscope's Artificial Lift Technologies comprise integrated services, products and technologies engineered to seamlessly improve pumping efficiencies, minimize failures, and reduce your lease operating expenses.

Our proven systems approach of Corrosion Control, Wear Mitigation, Inspection Programs, and Advisory Programs helps you manage well performance costs and extend the life of your production string.

Machining & Threading Services

Our machining and threading services combine the latest CNC technology with API-trained technicians, certified inspections, and precise gauging practices—delivering premium and API-Compliant Drill Pipe and OCTG Solutions from a local, one-stop, full-service provider.

TCS™-Hardbanding

TCS Hardbanding offers best-in-class tool joint and casing wear protection that extends asset life and enhances performance in demanding drilling environments. Mobile and in-plant hardbanding services support drill pipe, collars, work strings, heavy weight, and other downhole components, all backed by a single global source for wire manufacturing, new pipe application, and re-application.

NDT Inspection Services & Mill Systems

Pipeline & OCTG Connection Systems

Asset & Inventory Management

MSI Pipe Protection Technologies (PPT)

NDT Inspection Services & Mill Systems

Advanced inspection technologies and services validate tubular integrity and reliability by identifying defects that help prevent failures, maximize asset performance, and support safe, reliable operations. We are also a leading provider of pipe mill and end-finishing inspection equipment, with installations worldwide.

Available inspection capabilities include proprietary EMI, UT/PA, Wall Mapping, OD Measurement, TruMap™ Multidimensional Inspection, MPI, Visual and Manual Dimensional Inspection, and Connection Leak Detection.

Pipeline & OCTG Connection Systems

Our connection technologies deliver corrosion protection and efficiency enhancements for reliable, high-performance operation in demanding applications. KC™ Connection, a modified API connection protects against corrosion and leakage; Thru-Kote™ U.B., Welded Pipeline Connection System provides continuous internal coating protection; and Zap-Lok™, mechanical interference pipeline connection enables safe, fast, and reliable pipeline installation.

Asset & Inventory Management

Real-time material tracking and customizable reporting deliver full visibility and control over your tubular assets, driving greater efficiency, accuracy, and standardization across operations.

MSI Pipe Protection Technologies (PPT)

We specialize in the design and manufacture of high-quality thread and pipe protection solutions, offering the widest range of products on the market. Our product range includes protective equipment ranging from light-duty end caps to heavy-duty thread protectors designed to safeguard pipe threads in harsh environments and high-impact conditions.

Please contact your local Tuboscope representative for information about these services in your area.
