ABOUT ENERGY FOUNDATION SERVICES

TorcSill's helical piles (TorcSills) are a proven solution to the most demanding upstream and midstream oil and gas needs. With a nationwide footprint of 13 strategically located Construction Services Districts and counting, deliverability is at the heart of TorcSill's Energy business unit.

Serving a technical and demanding customer base in the upstream and midstream sectors, our experience of hundreds of thousands of piles span applications such as:

Exercising its in-house multi-disciplinary engineering, TorcSill is the premier partner in Energy construction, specializing in designing the most efficient foundation for each of its Projects, including direct-steel connections for entire gas plants and compressor stations.

Proximity to its customers' field assets also allows for TorcSill's Construction Services TEAMS to cost-effectively exercise the intrinsic value of helical piles, removing and reusing previously installed piles for temporary and semipermanent structures.
