

Integrity Management Services

Pipeline integrity. Compliant operations. Intelligent execution.

Aging infrastructure, tightening regulatory scrutiny, and the pressure to reduce downtime leave no margin for gaps in an integrity program. Paxon Energy and Infrastructure delivers pipeline integrity management that helps operators maintain safe, compliant, and efficient systems — from planning through final closeout. Disciplined field crews, engineering oversight, and intelligent field engineering combine to give operators real-time visibility into work status, anomalies, and documentation, with records built to withstand PHMSA review.

What we deliver

Planning and design

Descriptive, predictive data capabilities support procedure development, risk assessments, and mitigation strategies.

Assessment and cleaning

In-line inspection runs, pigging operations, chemical and mechanical cleaning, and debris field mapping.

Field services

Dig site inspections, temporary piping installation, and full management of integrity operations including hard-to-pig pipelines.

Closeout and reporting

Audit-ready documentation, integrity reports, and lessons learned that support PHMSA review, continuous improvement.

How we differentiate

Application expertise

We reduce risk exposure and deliver value across the full integrity lifecycle — from assessment through remediation and final closeout.

Services tailored to objectives

Integrity products and services customized for midstream, transmission, and distribution operators — no templated programs.

Offline and online tool capabilities

Our technical team plans and executes complex integrity jobs on site, regardless of pipeline classification or access conditions.

Intelligent field engineering

Every field signal links to an asset. Every asset accumulates a risk history. Accurate data at the source mitigates return trips and speeds closeout.

CASE STUDY: ARIZONA

Custom caliper locates diameter change without excavation

Paxon designed and deployed a custom 6×4 caliper tool to inspect a 3,000-ft gas line with an undocumented 4-in. subsegment crossing an environmentally sensitive corridor and an active railroad — without a single excavation. Complete geometry inspection and XYZ mapping delivered for integrity and GIS records.

3,000 ft inspected | 0 safety incidents |
0 excavations

CASE STUDY: CALIFORNIA

Compliance and scale: 3,000 projects, \$500M+ over seven years

Over a seven-year engagement, Paxon managed nearly 3,000 projects valued at more than \$500 million for a major gas transmission and distribution operator — including in-line inspection, casing remediation, non-destructive examination, pipe replacement, and emergency response.
