

LNG (Liquefied Natural Gas)

Nitrogen Services

BENEFITS

- Over pressure shutdown
- On-board LED work lights
- Low / High Rate Capabilities on 740k units
- 450°F at 3,000 scfm
- Small footprint with bobtail
- Pressure safety valve certification set to clients' specified pressures

NITROGEN APPLICATIONS

Nitrogen plays a critical role in contributing to the commissioning and maintenance of LNG facilities, assisting operations to meet their optimal efficiencies. Some of the applications where nitrogen benefits various industrial processes are, but not limited to, purging and inerting, oxidation prevention, leak testing, dynamic dry outs, liquified cooling, and catalyst support. Other benefits of having mobile nitrogen services include reduction in downtime, lower energy consumption (generated nitrogen), lower operating costs, uninterrupted supply of nitrogen, and high nitrogen purity (99.999%), eliminating cavitation. N2 Solutions utilizes its experienced operational, safety, and project management team to find the best solution for our clients' needs.
