PIPELINE INTEGRITY

ADVANCED PIPELINE INTEGRITY SOLUTIONS. FROM VERIFICATION TO VALIDATION.

From material verification and ILI anomaly assessments to SCC sizing and repair verification, JANX delivers advanced inspection technologies and actionable data that help operators reduce risk, improve asset reliability, and make confident integrity decisions.

MATERIAL & ASSET VERIFICATION SOLUTIONS

- **Laser Scanning & 3D Modeling** – Precise corrosion, dent, and deformation measurements for engineering evaluations.

- **Material Verification –** Non-destructive material property verification supporting MAOP reconfirmation and integrity assessments.
  - Supports:
    - 49 CFR §192.607 — Material property verification
    - 49 CFR §192.712 — MEGA Rule material verification
    - 49 CFR §195.120 — Hazardous liquid material verification

REMEDIATION, VERIFICATION & PROGRAM SUPPORT

- **Environmental & Indirect Inspection Support** – Environmental and indirect inspection data critical to corrosion threat identification and mitigation, including:
  - Soil resistivity and soil pH
  - Groundwater pH
  - Coating condition assessments
  - Depth of cover measurements
  - Topographical and site data

- **Repair Quality Control & Verification** – JANX provides inspection and quality verification services throughout the repair process to support workmanship requirements, repair acceptance, and regulatory compliance.
  - Post-repair NDE verification
  - Certified Welding Inspector (CWI) services
  - Grinding repairs for arc strikes, gouges, and SCC

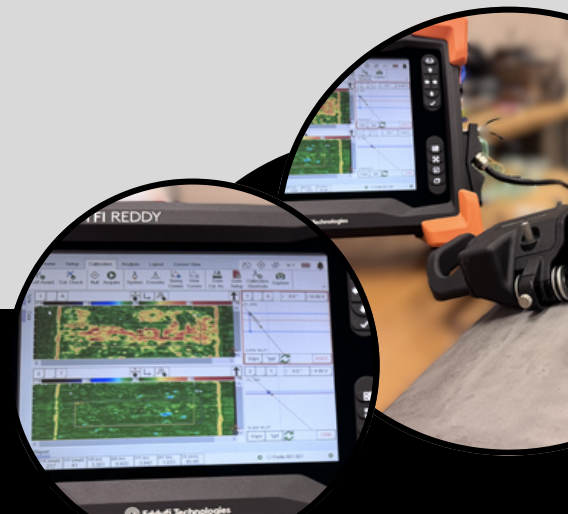

THREAT IDENTIFICATION & ASSESSMENT SOLUTIONS

- **Guided Wave Examination (*Short Range and Long Range*)** – Screening of difficult-to-access pipeline segments and areas unsuitable for conventional inspection including:
  - Buried pipe sections
  - Road and river crossings
  - Pipe under supports and sleeves
  - Locations where ILI tools are not feasible

- **Advanced UT, PAUT & Corrosion Mapping (Including FMC/TFM)** – High-resolution inspection technologies for detecting, characterizing, and sizing corrosion, cracking, and other pipeline anomalies to support engineering evaluations and repair decisions
  - Stress Corrosion Cracking (SCC)
  - Cracking and planar flaws
  - Corrosion and metal loss

- **Eddyfi Spyne & Sharck HR — Advanced SCC Solutions –** Advanced SCC detection and sizing to support ILI validation and repair decisions.

- **ILI Verification & Direct Examination** — Comprehensive field verification of reported anomalies through advanced NDT, corrosion mapping, SCC sizing, and material assessment technologies to support integrity evaluations and repair decisions.

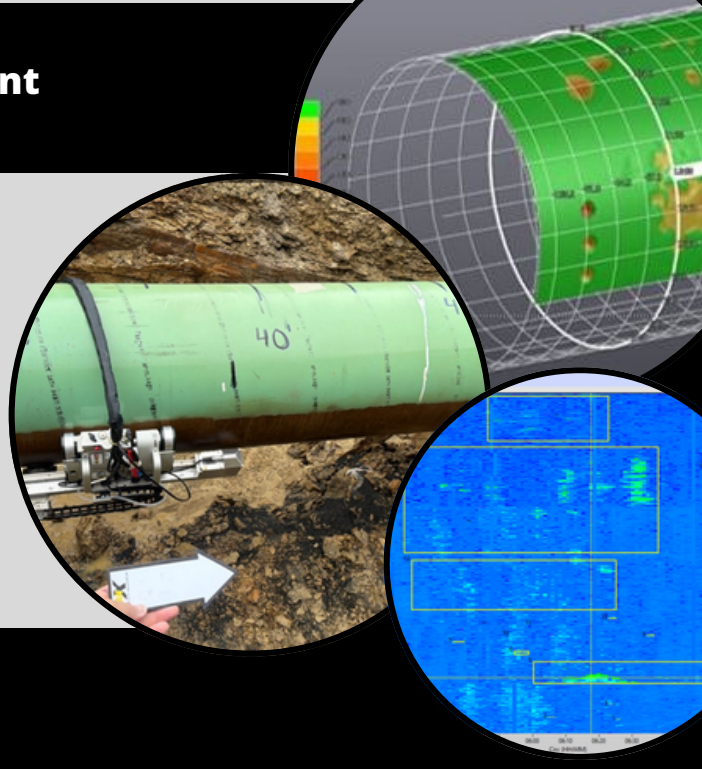

REGULATORY SUPPORT

JANX inspection technologies provide data supporting applicable integrity management, material verification, anomaly assessment, and remediation requirements under 49 CFR Parts 192 and 195.

JANX | PIPELINE INTEGRITY

Advanced Inspection. Actionable Data. Confident Decisions.

Why Choose JANX

- Comprehensive, end-to-end pipeline integrity solutions covering verification, assessment, remediation, and validation
- Regulatory-driven approach aligned with PHMSA requirements across 49 CFR Parts 192 and 195
- Advanced technology portfolio for SCC and cracking, including Eddyfi Spyne®, Sharck HR®, and PAUT FMC/TFM
- Defensible, high-quality inspection data that supports engineering critical assessments and audits
- Single-source accountability that simplifies integrity management and reduces interface risk

PROVEN PERFORMANCE

Pipeline Integrity Reporting Metrics

ABOUT US

NATIONWIDE MOBILIZATION
Experienced teams available to support pipeline integrity programs across the U.S.

EXPERIENCED PIPELINE PROFESSIONALS
Qualified personnel with practical field experience and technical expertise.

ADVANCED INSPECTION TECHNOLOGY
Specialized solutions for SCC, metal loss, material verification, and anomaly assessment.

RELIABLE, ACTIONABLE REPORTING
High-quality inspection data supporting timely engineering and repair decisions.

NATIONWIDE CAPABILITIES. LOCAL EXPERTISE.

With over 45 years of experience, JANX delivers advanced, defensible pipeline integrity solutions that help operators manage risk and meet PHMSA regulatory requirements.

Our non-destructive testing (NDT) technologies provide accurate, actionable data to support integrity management decisions that protect people, property, and the environment.
