## Cellular Pipeline Pig Passage Notification System with Free Texts on Passages

**PASSAGE DETECTION:** PigAlert is CDI's innovative cellular-equipped pipeline pig passage notification system. PigAlert works with GlobalTrack, our live-mapping pig tracking service to send detailed text message notifications to users.

**TEXTING:** Simply scan the QR code on the PigAlert, enter your cell number, and you're done. You can work elsewhere and when a launch, passage, or trap occurs, everyone who scans the PigAlert will be notified in seconds via text and bright flashing LEDs. Each text provides the GPS passage time along with a Google Maps link showing the location of the passage.

PigAlert is magnetically stuck to the pipeline where it will detect the passage of any magnet-equipped pipeline pig. Durable and water-proof, PigAlert will last for years.

**WIRELESS FLASHER:** As with the PigAlert base unit, the water-tight, wireless indicator flasher shown below is equipped with powerful magnets so that it can be attached to a pipeline or vehicle, operating at a distances of up to 100 feet.

**NO FEES:** Perhaps most importantly, there's no need to fear ongoing operational expenses with PigAlert. Every single PigAlert ships with a fully activated SIM card and cell module, pre-installed with a lifetime of data at no extra charge and absolutely no monthly fees ever.

### Specifications and Features

Operation	Magnetic passage detection (MFL, cleaning magnets or trip magnets)
Type of Pigs Detected	Any magnet-equipped pig
Package	Water-tight polycarbonate plastic with sealed membrane keypad
Passage Indications	SMS text message Internal LEDs Remote wireless indication lamp
Batteries	Rechargeable via USB-C
Cell Data	500MB built-in, no recurring charges
Operational Temperature Range	-40°C to +85°C

Wireless Remote Flasher Option

\* PigAlert ships supplied with 500MB of cellular data, enough to transmit 30,000 pig passage notifications.
