PIG PASSAGE INDICATORS**

**SERIES
57, 55, 53 & 67**

world class world wide

PIG PASSAGE INDICATORS

Our patented pigPRO™ Indicators are designed to accurately detect the passage of a pipeline cleaner travelling within a pipeline system.

FEATURES

- Adjustable plunger
- Compression spring
- Easy connection to hot tapping equipment
- pigPRO™ Series 53, 55 & 57 are registered with a Canadian Registration Number (CRN: 0H20042.21)

MATERIAL

- Stainless steel components
- Conform to NACE standards

RELIABILITY

- Hemispherical shape of the plunger
- Absence of gears in the trigger indication
- Visual flag/manual reset
- Electrical switch/auto reset
- Combination of both

OPTIONS

- **Flange Mount:**
Flange base models are manufactured to mount to existing flanged connections and are available in class 150, 300, 600 or 900 ANSI flanges. Conversion kits are also available which enable installation onto the mountings of other manufacturers.
- **Extension Pole:**
Aluminum extensions can be attached to enable detection of the pigs' passage on buried pipelines. All pressure-sealing components remain below the extension module. Available in lengths of 2' to 8'.

SERIES 57

Visual Indication

Manual Reset

Our most popular pigPRO™, the basic Model 57, is a visual flag indicator with manual reset. It includes a thread mounting nipple, standard lower housing with fluorocarbon O-Rings and hemispherical plunger with a flag assembly.

THE UNIQUE DESIGN OF THE **57 MODEL** IS UNRIVALED IN THE INDUSTRY AND CONTINUES TO WIN CUSTOMER ACCLAIM FOR ITS PERFORMANCE.

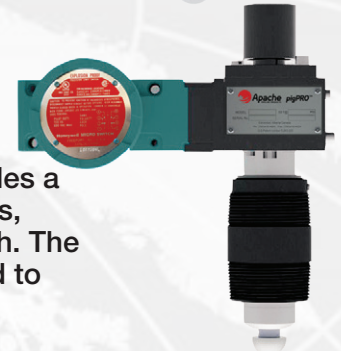

SERIES 55

Electrical Indication

Auto Reset

The basic Model 55 is an electrical indicator with automatic reset. It includes a thread mounting nipple, standard lower housing with fluorocarbon O-Rings, hemispherical plunger and weather sealed and explosion proof limit switch. The switch employed on this model is NEMA rated, UL listed and CSA certified to suit most applications.

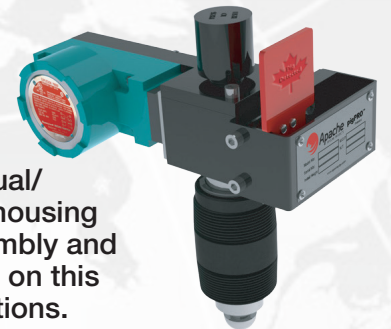

SERIES 53

Visual/Electrical Indication

Manual/Auto Reset

The basic Model 53 is a combined visual/electrical indicator with manual/automatic reset. It includes a thread mounting nipple, standard lower housing with fluorocarbon O-Rings and hemispherical plunger with a flag assembly and weather sealed and explosion proof limit switch. The switch employed on this model is NEMA rated, UL listed and CSA certified to suit most applications.

Series 67

Visual Indication/Isolation

Manual Reset

The Model 67 adds safety and servicing options to our existing line of intrusive pig passage indicators. Incorporating a customized BV with an extended lower housing into the design of our model 67 pigPRO™ allows for a safe and simple isolation of the pig passage indicator from pipeline pressure for inspection, maintenance or repair. Complete removal and re-installation on any pressurized line is easy using the Extraction Kit and does not require specialized hot tap professionals or equipment.
